

Job Role: Associate Cloud Engineer

Company: Stratos Cloud Systems

Package (CTC): 14 LPA

Date of Visit: 28-11-2026

Minimum CGPA: 8.2

Eligible Branches: CSE, ISE, ECE, AIML

About the Company

Stratos Cloud Systems is a premier enterprise cloud architecture provider delivering next-generation digital transformation infrastructure, automated deployment frameworks, and serverless computing operations globally.

Job Overview

We are searching for an agile Associate Cloud Engineer to design, deploy, and scale microservice infrastructures within modern hybrid-cloud environments while working alongside senior architectural engineering leads.

Key Responsibilities

- **Infrastructure Orchestration:** Automate cloud resource scheduling via Infrastructure as Code (IaC) architectures.
- **Container Management:** Deploy and maintain continuous production container configurations utilizing Docker and managed Kubernetes platforms.
- **Monitoring & CI/CD:** Establish diagnostic metrics collection, application logging alerts, and integration pathways inside pipeline models.
- **Team Collaboration:** Engage in platform reliability engineering evaluations, agile sprints, and architectural reviews.

Requirements & Qualifications

- **Academic Background:** Enrolled in B.E. / B.Tech across CSE, ISE, ECE, or AIML fields.
- **Performance Criteria:** Minimum cumulative score tracking at an 8.2 CGPA boundary with zero structural backlogs.
- **Core Essentials:** Functional command over Linux administration concepts, cloud operations platforms (AWS, Azure, or GCP), and core network paradigms.
