

JOB DESCRIPTION

Job Title: Data Analytics Engineer

Company: Vortex Analytics

Minimum CGPA: 7.8

Package (CTC): 10 LPA

Eligible Branches: CSE

Drive Visibility: My Department (CSE)

About Company

Vortex Analytics is a premier data solutions firm helping businesses gain critical insights from big data. We architect scalable data systems, build complex analytical models, and provide modern enterprise business intelligence.

Key Responsibilities

- Design, build, and maintain robust and scalable data analytics pipelines.
- Optimize data warehouse performance using platforms like Snowflake or BigQuery.
- Develop sophisticated data models and interactive, visual dashboards (Tableau/Looker).
- Collaborate extensively with cross-functional engineering teams to translate requirements into technical pipelines.
- Implement end-to-end data quality controls and continuous performance monitoring.

Requirements & Qualifications

- Enrolled in B.E. / B.Tech in Computer Science Engineering (CSE) branch.
- Minimum CGPA criteria of 7.8 or above with no active backlogs.
- Strong fundamental proficiency in SQL and Python (or Java).
- Basic exposure or interest in modern ETL/ELT workflows or orchestration tools (dbt, Airflow).
- Excellent analytical communication and structured problem-solving skills.

Compensation & Benefits

Fixed CTC: 10 LPA (inclusive of base components and performance allowances).

Perks: Full corporate health insurance covers, continuous technical learning stipends, flexible hours, and remote wellness subscriptions.
